

Boldly Leading Breckenridge

Wastewater System Improvements

Overview

The City is working to improve upon and upgrade the WWTP and wastewater collection system. Several components within the City's wastewater system are aging and are past their intended useful life including the pretreatment system, aeration for the oxidation ditch, belt press, and different components of the lift stations. In addition, some of the City's sewer pipes are dilapidated and replacing them is anticipated to prevent future unauthorized discharges. Making these changes will provide a better wastewater system for the customers of the City and keep the City in compliance with TCEQ regulations.

Project details

- Funded through the Texas Water Development Board Clean Water State Revolving Fund
- Improvements made at the wastewater treatment plant and in the wastewater collection system will increase the ability of the plant to treat the incoming flows and reduce the risk of system overflow while improving the environmental safety to residents and wildlife.
- The project includes wastewater treatment plant improvements, lift stations, flow metering and pipe installation.
